Dr. Janina R. Galler

Janina R. Galler, MD, is Professor of Psychiatry at Harvard Medical School and a Senior Researcher, Division of Pediatric Gastroenterology and Nutrition, Massachusetts General Hospital for Children.

Dr. Galler is recognized as a leader in the areas of child nutrition and mental health. Her multidisciplinary research has focused on the effects of childhood malnutrition on brain and behavioral development throughout the lifespan and across generations. She is the founding Director of the Barbados Nutrition Study, a 48+ year longitudinal study that has followed children with histories of malnutrition, their offspring and grandchildren.
